

Barnet Homes Sheltered IT Project

The project aims to train about 60 residents living in sheltered schemes in the use of IT. The course covers word processing, spreadsheet and database packages in addition to internet skills

Two residents will also be trained in PC maintenance and web design. This will enable residents to maintain IT equipment and build their own website

The purchase of appropriate IT equipment enables the Sheltered Housing Partnership Panel meetings to be held online

The project is ongoing but has already been successful with many residents having completed the course and received their certificates.

One of the residents with some help from others has also produced a PC with Confidence guide.
